

Press Release

Achmea's Solvency II level year-end 2015 under approved internal model at 201%

Zeist, 6 April 2016

Achmea announces that the Group's Solvency II level, calculated according to the approved Partial Internal Model, is 201% as of 31 December 2015. This level includes the group's banking and asset management activities and is subject to final interpretation of Solvency II regulations.

Willem van Duin, chairman of the Executive Board of Achmea: "It's good to see that the group's solid financial position is also reflected under Solvency II. A solid financial position is a prerequisite for the long-term fulfilment of the commitments we have made to our customers. Achmea's partial internal model for Non-life insurance risk has been approved by among others the Dutch central bank for use for prudential purposes. Using the partial internal model provides Achmea with even better insights in its risks, allowing for better risk management and improved protection of the interests of our customers."

Further details on Achmea's Solvency II capital position will be provided at our Capital Markets Day on May 26.

Achmea is a cooperative insurance group with strong brands that serve about 10 million retail customers in the Netherlands. Together they form the largest insurance group in the Netherlands, with approximately 15,000 employees. In addition to the home market of the Netherlands, Achmea is also internationally active in five other countries. Achmea has a cooperative background whereby the interests of customers, business-partners, employees and shareholders are balanced. In 2015, Achmea's customers paid premiums totalling approximately €20 billion to cover their costs of healthcare, property and casualty losses, for income protection, pensions and life insurance. <http://www.achmea.com>
